

Hi, I am looking for some help on the AutoCropPage Method, as I cannot seem to get it to crop at all.  
I have tried many inputs for the margin Parameters without any luck.

The files I am processing have clear black borders on 3-4 sides, and crop quite easily using the CropBlackBorders.

I need to crop the pages as PDF pages as they are already OCR'd, and bring them out to GDPictureImaging would require re-OCR'ing.

Sample

```
Dim GDpdf As New GdPicturePDF
    GDpdf.NewPDF()
    Dim message As String = ""
    Dim status As GdPictureStatus = GDpdf.LoadFromFile(Filename, True)
    If status = GdPictureStatus.OK Then
        Dim pageCount As Integer = GDpdf.GetPageCount()
        status = GDpdf.GetStat()
        Dim pageNo As Integer = 1
        While (pageNo <= pageCount) AndAlso (status = GdPictureStatus.OK)
            GDpdf.SelectPage(pageNo)
            If status = GdPictureStatus.OK Then
                GDpdf.SetMeasurementUnit(PdfMeasurementUnit.PdfMeasurementUnitInch)
                status = GDpdf.AutoCropPage(0.25, 0.25, 0.25, 0.25)
                status = GDpdf.GetStat()
            'End If
        End If
        pageNo += 1
    End While
```
